SAMPLE APPS

Web app: Hair makeover

Chrome extension: Generate video from any image

Outputs

After a task succeeds, the `GET /v1/tasks/:id` endpoint will return a response like this:

```
{
  "id": "d2e3d1f4-1b3c-4b5c-8d46-1c1d7ee86892",
  "status": "SUCCEEDED",
  "createdAt": "2024-06-27T19:49:32.335Z",
  "output": [
    "https://dnznrvs05pmza.cloudfront.net/output.mp4?_jwt= ..."
  ]
}
```

The `output` member will contain one or more URLs that link to the result of your generation.

It's important to note that these URLs are ephemeral: they will expire within 24-48 hours of accessing the API. We expect you to download the data at this endpoint and save it to your own storage. Since these URLs will expire, do not expose them directly in your product.
